

There is many web site to teach different language and it`s so useful for the people around the world to learn new thing my idea to have app for the young people to help them through there school and allow them to learn more about the subjects that they study with exciting way.

It will help student to love what they doing and try to focus more about there study and even have some competition between each other to get better score. This also will help teachers to give the student what they find it interesting. By adding questions and some exams.

There is some features I think about like competition between 2 student to solve exam or exercise and to show him the score immediately and to give him some point if he wins and make it like interesting game but about his study. And to make student can add their friends and challenge them or even challenge with other student not in there friend list.

There is some other features but it will be for the teacher himself to can add questions or even exams and to allow him to add his student to one group to give them the exam and the rustle will be right away after they finish it.

The app or the web sites around only focus about the language but my app mainly for student and to help they to get better scores in there school time and to help teacher to monitor his student achievement.

There is many app with same idea about learning and teaching but all focus on language only it's like
